Attention!

O rings have after the finishing process (deburr) decrease of hardness through a mechanic strain up to 10 hardness units. Therefore the target area for the O-rings has to be specified on 65 +5/-8 IRHD (micro hardness)

The given values are based on a limited number of tests on standard test pieces (2mm sheets) produced in the laboratory. The data from finished parts can deviate from above values depending on the manufactories process and the component geometry.

The data represents our present empirical values. It is incumbent on the person placing the order to examine whether it is suitable for its intended purpose, before using the product. All questions regarding the guarantee of this product are in line with our terms and conditions, inasmuch as statutory provisons do not plan for something else.
